PROFESSIONAL SUMMARY

I am a Software Developer with over 4 years of experience, primarily working with C# and the .NET Core ecosystem. Throughout my career, I have worked on ERP systems, CMS platforms, e-commerce solutions, and various backend services. I have experience with ASP.NET Core, Entity Framework Core, ADO.NET, MS SQL Server, Redis, RabbitMQ, and SignalR, as well as JavaScript and jQuery on the frontend. I have also worked with technologies such as Node.js, React, React Native, and MongoDB. In addition to software development, I have been involved in requirements analysis and worked directly with business users to understand their processes and turn their needs into software solutions. I enjoy working across both backend and frontend development, with a stronger focus on backend systems and database-driven applications.

PROFESSIONAL EXPERIENCE

Software Developer | E-VET Yazılım (Hasvet) — Antalya, TR | Apr 2022 – Jul 2026

- Maestro ERP Platform — Led backend and frontend development on a large-scale, multi-module ERP system serving veterinary and pet industry operations. Took full ownership of feature delivery across the following modules:
- Sales & CRM: Designed and implemented customer management, order processing, and sales pipeline workflows in close collaboration with business stakeholders to align system behavior with real-world sales processes.
- Finance & Accounting: Built invoice management, payment tracking, and financial reporting features; analyzed business requirements with accounting teams to ensure regulatory and operational compliance.
- Inventory & Warehouse Management: Developed stock tracking, warehouse operations, and real-time inventory visibility modules; participated in requirements analysis with logistics teams.
- HR Module: Implemented employee records, leave management, and organizational structure features; gathered and formalized requirements through direct stakeholder interviews.
- Reporting & BI: Built dynamic reporting infrastructure enabling management to extract actionable insights from operational data across all modules.
- Product, Shipment & Promotions: Developed product catalog management, shipment tracking integrations, and promotional campaign (çekiliş/draw) features covering end-to-end business flows.
- Maintained direct communication with clients and business users throughout the full development lifecycle — from initial requirements analysis and process mapping through delivery and iteration — gaining strong hands-on understanding of both the technical and business sides of ERP systems.
- CounselEM CMS — Built the complete content management backend for a mobile application designed for emergency medicine physicians, intern doctors, and medical academics. Collaborated directly with an academic emergency medicine physician to define clinical content structures, terminology, and user workflows. Owned the full project lifecycle: requirements gathering, database schema design, API architecture, and frontend CMS implementation.
- HasvetIntranet — Architected and built from scratch a full-stack internal company platform. Conducted comprehensive internal needs analysis across departments, planned the project roadmap, designed the database, and developed both the backend API and UI layers — delivering a centralized hub for company-wide operations.
- Pet Food CMS Platform — Built the CMS and API for the company's consumer-facing pet food product site, covering API design, web frontend, and database modeling.

- Implemented cargo, e-commerce, and identity/authentication integrations across multiple live projects.

Technologies: .NET Core, C#, ADO.NET, Entity Framework Core, MS SQL Server, Redis, RabbitMQ, SignalR, JavaScript, jQuery, Azure DevOps, Git

Software Developer | Athena Bilgisayar — Antalya, TR | Jan 2022 – Mar 2022

- Developed RESTful API services in Java with MS SQL Server as the primary database.
- Contributed as backend developer on a vehicle tracking system, from initial architecture through deployment.

Technologies: Java, MS SQL Server, REST APIs

Software Developer | Sodyum İnternet ve Medya Reklamcılık Hizmetleri A.Ş. — İstanbul, TR | Mar 2021 – Jun 2021

- Converted static websites (Ting Yapı, Turkish Ground Services, Sodyum) to dynamic CMS-backed systems.
- Built MVC applications using layered architecture, Entity Framework (Database First), and MS SQL.

Technologies: ASP.NET MVC, Entity Framework, MS SQL Server, N-Layer Architecture

TECHNICAL SKILLS

- C# / .NET Core • ASP.NET Core • MS SQL Server
- Entity Framework / Core • ADO.NET
- MS SQL Server • Redis • PostgreSQL • MongoDB
- JavaScript / jQuery • React • React Native • Node.js • Next.js
- RabbitMQ • SignalR (WebSocket)
- Azure DevOps / Git
- Docker

OPEN SOURCE & SIDE PROJECTS

- hsa-image-compressor — npm package for server-side image compression
- hsa-video-compressor — npm package for video compression and resizing
- link-checker — Chrome extension that validates whether page links are active
- whatsapp-blur — Chrome extension that blurs WhatsApp Web contact list on hover for privacy
- AzureAttachmentDownload — Chrome extension to batch-download Azure DevOps task attachments as a ZIP

EDUCATION

B.Sc. Computer Engineering | Nişantaşı University, İstanbul, TR | Oct 2017 – Jun 2021

CERTIFICATIONS

- Node.js — Zero to Advanced Web Development · Udemy (Aug 2024)
- ASP.NET Core API + JWT-Based Authentication · Udemy (Aug 2023)
- React 101 / 201 / 301 · Turkcell Geleceği Yazanlar (Aug 2023)
- ASP.NET Core + Redis / In-Memory Caching · Udemy (Apr 2022)
- RabbitMQ with .NET Core · Udemy (Mar 2022)
